

MZ7 TYPE THERMISTOR for Degaussing

FEATURES

Superior degaussing component of colour TV set and monitor.
Current-Limited unite in AC circuit.

APPLICATION ENVIROMENTAL CONDITIONS

Environmental temperature:-10℃ ~ +85℃
Relative humidity:93±2%(+40℃ ±2℃)
Vibration frequency 1 0~55Hz
Acceleration:98m/s²

APPLICATION CIRCUIT

This is a basic degaussing circuit, if residual currents requested zero, this circuit usually a switch. When necessary the switch is turned off.

Current-Time Characteristic(Dynamic Characteristic)

Heating element (1) causes the resistance value of Element (2) to increase and make the stable current extremely small. Thus in many cases, the circuit is designed to be linked to the power switch so that degaussing is performed automatically when the power is turned on.

When excessing power is applied to the themistor,a large current flow momenarily,then the self-heating feature of the themistor causes the resistance value to increase and the current value to decrease. Thus, the thermistor controls degaussing function ideally.
